

ZL Unified Archive SharePoint Archiving

Key Benefits:

Centralizes SharePoint content with all other archived content

Reduced cost and storage related to managing high volumes of data

Increased SharePoint server performance

Seamless end-user searching and corporate discovery

ZL Unified Archive enables organizations to manage the lifecycle content of their SharePoint environments. ZL SharePoint integrates with Microsoft Office SharePoint Server 2007 and 2010 to automatically archive all custom SharePoint content types and permissions. ZL SharePoint Archiving offloads old content from the SharePoint file store into the ZL Vault, where content can be centrally accessed and searched by end-users. ZL UA SharePoint Archiving allows administrators to enforce governance policies for retention and disposition, increase SharePoint server performance, and reduce storage costs.

Automated Retention for Records Management and Litigation Preparedness

ZL UA centrally manages the retention and disposition of electronic records at enterprise scale. ZL supports a virtually unlimited number of policies with highly granular rules, ensuring that administrators can implement retention schemes that match business and legal requirements.

ZL leverages the highly granular Rules and Policy Engine to assign retention periods based on file characteristics, including categories triggered by words within the file. Seamless integration with other ZL modules also allows targeted legal holds. ZL's retention policy management simplifies and ensures the proper retention and disposition of electronic records, thereby supporting business needs and reducing enterprise risk.

Reduced Storage Costs

Unified Archive software reduces the load on SharePoint servers by moving older content into lower tier storage while maintaining accessibility. After scanning SharePoint file stores, old files are automatically ingested into the ZL archive and replaced with small shortcuts pursuant to organizational policy. Utilizing cost-effective storage media for large volumes of archived content frees up high-end storage, helping enterprises reduce storage and administrative costs.

Fast, Unified Searching

Leveraging single-point access, end-users can access the full range of archived data directly through the existing SharePoint interface. ZL allows users to search the archive based on SharePoint workspace permissions which reflect which users have the right to access, read, write or delete a file. Other advanced search criteria, such as author, title, date, department, keyword, content type, etc. are also available. ZL's industry leading search speed enables iterative searching, allowing queries to be refined for accuracy, improving end-user productivity.

The ZL Platform

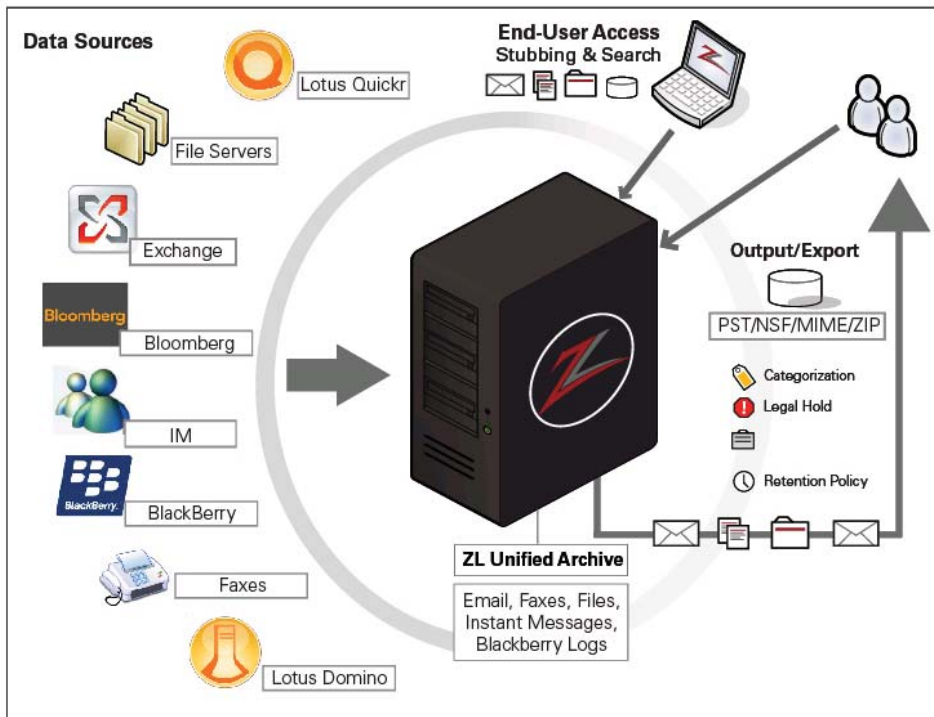

ZL UA integrates these key capabilities in a seamless, scalable platform which runs in all popular operating environments, including Windows NT, Solaris and Linux. Highlights include industry-leading scalability, open standards support (Java/J2EE, Web services, WebDAV, etc.), and broad integration with leading email clients and web browsers.

ZL TECHNOLOGIES INC.

ZL Unified Archive

ZL Unified Archive provides a unified archive for unstructured and structured corporate data. It is a full-fledged content lifecycle management platform for e-mail, files, and other data and supports over 1,000 different file types. Such extensive management of e-mail and files is needed for legal discovery, storage management, regulatory compliance and records management. ZL's highly scalable architecture enables large enterprises to capture, store, index, search, retrieve and apply lifecycle policies to a myriad of digital formats. ZL UA allows enterprises to consolidate disparate data across the enterprise into very large repositories, increasing economies of scale and enhancing control and performance. Given escalating demands, such end-to-end, enterprise-wide digital records management necessary for corporate governance, regulatory compliance and E-Discovery.

About ZL Technologies, Inc.

Established in 1999, ZL Technologies, Inc. (ZL) provides cutting-edge enterprise software solutions for e-mail and files archiving for regulatory compliance, litigation support, corporate governance, and storage management.
