

Unified Archive[®]

The Power of One.

Unified Archive provides the industry's only information management solution that seamlessly archives dozens of file types for storage optimization, eDiscovery, compliance, and records management—all on a single platform. The power of our solution is rooted in its unified architecture, resulting in one data copy, one policy, and one platform across the entire enterprise.

One Data Copy.

One Policy.

One Platform.

What can The Power of One do for you? ►

What is The Power of One?

“Compared to other vendors’ products, ZL Technologies’ is so user-friendly, efficient, and easily navigable that it’s almost unfair to call the other vendors ‘competitors’ as their products were inferior and complicated.”

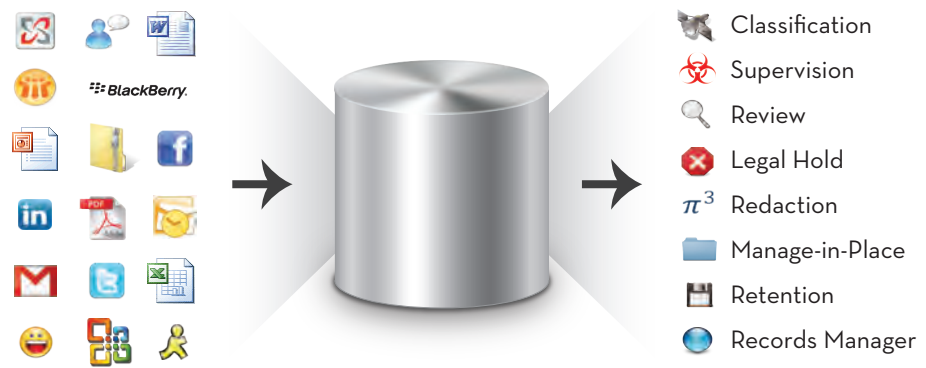

– Crews & Associates

“With proven scalability for compliance archiving, native double-byte capabilities, and an extensive set of features, ZL’s solution is well ahead of the curve.”

– The Radicati Group

One unified architecture to handle all your information needs

Unified Archive’s elastic architecture, a private cloud computing environment that leverages any number of servers to handle billions of electronic files, is what makes such a powerful, scalable, and secure platform possible. While other point solutions in the industry individually address issues surrounding storage, eDiscovery, compliance, and records management, only Unified Archive has the unique architecture to offer a completely comprehensive, in-house solution.

Storage Optimization

- Decreases storage requirements by up to 95% by ensuring only one copy of data is stored
- Saves costs associated with expensive production servers by storing all data in one vault

eDiscovery

- Minimizes cost and risk associated with outside resources by processing all data in-house
- Returns results of a single enterprise-wide search in literally seconds

Compliance

- Sets policies on one application to comply with numerous regulations (like SEC, NASD, FERC)
- Guarantees 100% capture of all data sources

Records Management

- Proactively manages information using organization’s document retention policies
- Reduces risk of error by managing information from a single policy framework
