SAN JOSE, CA: Enterprise software provider ZL Technologies announces the general availability the latest version 8.0.1 Unified Archive (ZL UA). The solution is a unique, single-platform approach that offers enterprises an all inclusive system compliance and supervision, records management, and storage requirements while building an unparalleled foundation in analytics.

ZL UA consolidates data into a single repository of accumulated data and builds up a revolutionary foundation for appl analytics within the living business environment. While competing solutions create or attempt to integrate disparate "silo unified approach by eliminating siloed architecture and ensuring that only one data copy is stored, retention policies are consistent search is performed.

Version 8.0.1 ZL UA incorporates host of enhancements.

ZL ZooKeeper Service: It is a distributed coordination and configuration management service that assists bulk deployments manage and process Big Data easily and system monitoring tools, one-step disaster recovery, and streamlined server configuration helps in optimizing large unstructured data environments.

ZL Discovery Manager: ZL custodian collection offers the tools to perform ad-hoc collections during the eDiscovery early case assessment (ECA) process in addition processed data already in the archive. Enhanced features in custodian preservations and workflows help slash redundancy for large firms facing frequent litigation.

ZL Records Manager: It brings about expanded automation of records management classification, utilization custom email and file attributes, lexicons, and more to classification with both granularity and ease. Faster Microsoft SharePoint crawl speeds help rein in the potential sprawl of collaborative environments.

ZL End User Mailbox: These tools allow end users to manage and delete data from their personal view of the archive, while still providing legal, compliance, and re lifecycle management of data. Calendar item search enhancements and Label View for Google Mail (Gmail) help users find the items they need with maximum efficien

Data Capture: ZL UA 8.0.1 expands on the data types supported for capture including Gmail calendars and tasks, OCR conversion policies, cloud-based Microsoft S Office 365 support, and more.

The other feature includes Optimization of ZL data processing and updates to task management to enhance the scalability of the ZL UA platform and high performanc programmatic access to an organization's information using simple, powerful, and secure application programming interfaces. It allows businesses to adapt data collec

"As large businesses look to leverage unstructured content such as emails and files for analytics, they increasingly discover that disparate architecture stands in their wa held that a unified approach maximizes the value of data, and our most recent product developments remain true to that visionary commitment," remarks Kon Leong, latest launch.
