## TIS Solution Business to Offer Email Archiving Solution for Internal Control

Tokyo, Jan 11, 2007 (JCN) - TIS Solution Business Co., Ltd. (TSB) today announced its release of ZipLip, an email archiving solution, which quickly archives large numbers of emails.

ZipLip also provides accurate responses for audits, eases administration and has reduced storage requirements. TSB obtained the sales and distribution in November from the US based ZipLip Inc. which developed it. The product is known in the US as the "ZipLip Unified Archival Suite".

ZipLip includes automatic encryption functions (for header, footer, and body of incoming emails) and allows for fast searching through years of emails. ZipLip saves 80% storage space by collected emails with the same body and file attachment together.

It comes with a spam filter and complies with industry regulations and corporate governance policies.

ZipLip can work alongside Lotus Notes and Microsoft exchange. TSB projects they will garner 2 billion yen in revenue within the next three years.
