ZL Technologies Introduces Migration Services for Autonomy Digital Safe Users

Feb 15, 2017

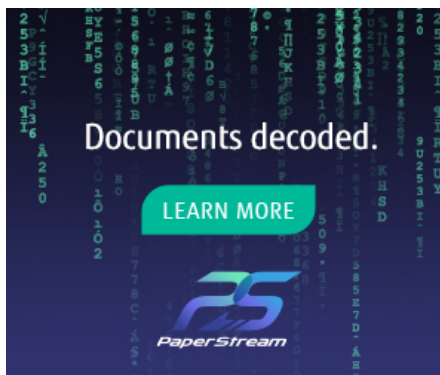

ZL Technologies, Inc. (ZL), a provider of information governance and analytics for the large enterprise, is releasing migration services for current users of Autonomy Digital Safe, a cloud-based information archiving solution.

According to ZL, the services provide complete customization for each unique customer environment, as well as access to its management functions such as legal hold, classification, deduplication, and retention. The company says migration can be executed with at least 99.95% accuracy of data transfer, and all data and emails are processed by lexical filters at the point of ingestion, providing visibility into what data can be deleted and reducing data transfer and storage costs.

ZL says the decision to offer these services was made following Hewlett Packard Enterprise's **spin-off merger** of Autonomy Digital Safe.

ZL is also offering ZL File Analysis and Management (ZL FAM) as part of its packaging for Autonomy users, allowing organizations to incorporate enterprise files into their governance initiatives, and providing complementary consultation and customized environment assessment for Autonomy customers.
