

### Cloud-based governance

Jun 18, 2013

**Viewpoint** and **ZL Technologies** have forged an alliance that calls for integrating the ZL Unified Archive into core components of Viewpoint's information governance platform, OnPointe.

The cloud-based solution offers advanced analytics, records and retention management, supervision and end-to-end e-discovery capabilities for electronic communications, file shares, legacy data and collaborative content, and enables organizations to meet DoD 5015 requirements.

OnPointe provides a governance platform that is said to allow organizations to keep pace with growing data volumes and the variety of data formats spread across the organization that challenge user productivity, IT efficiency and compliance efforts. Built as a flexible modular service that can grow with an organization, the OnPointe platform leverages the ZL Unified Archive to provide focused governance solutions to address such challenges as:

- governance of e-mail and electronic messaging;
- supervision of regulated communications, including instant messaging;
- control of file share and collaborative content; and
- management of end-to-end e-discovery processing and workflow.
