ZL Technologies Named a Leader in Gartner Magic Quadrant for Enterprise Information Archiving

Evaluation based on completeness of vision and ability to execute

MILPITAS, Calif., Dec. 04, 2018 (GLOBE NEWSWIRE) -- [ZL Technologies, Inc.](#) (ZL), a leader in information governance, today announced it has been positioned as a Leader in the Gartner Magic Quadrant for Enterprise Information Archiving. The Magic Quadrant is a highly influential report published annually by Gartner that maps vendors based on their completeness of vision and ability to execute, with the strongest players placed in the Leaders Quadrant. Among many factors, the report considers search, data management, e-discovery and compliance capabilities.

In the face of major changes in operating and regulatory environments, enterprises are now required to consolidate management of their data silos across the enterprise. For example, new privacy regulations, such as the EU's GDPR and California's CCPA, demand data to be managed across the enterprise with no acknowledgement of how difficult it is to bridge across data silos. ZL's governance solution was architected for this diverse data environment by offering a unified data management platform. It has been deployed by many of the world's largest companies to scale to manage billions of documents through a single management platform.

"Regulatory compliance, privacy, e-discovery and records management are already converging and need to be managed as pieces of the same puzzle," said Kon Leong, ZL Technologies CEO. "Our extensive history of unified data management has found ZL uniquely positioned at the heart of this convergence. This fact is reflected by the recognition we've received from analysts as well as our list of global partners and customers."
